Discharges of industrial wastewaters are generated from the alkaline tanks, Flash Clene 1414 tanks, water rinse tanks, floor mopping water and spill clean-up activities. Approximately 18,000 to 20,000 gallons a year of wastewater is generated with some of the wastewater being evaporated and the remaining being discharged to Corinne's publicly owned treatment works (POTW). TGW has been reporting self-monitoring results on discharge monitoring reports, on a monthly basis. In the last five years TGW has had a good compliance history. For more information regarding TGW's compliance history, see the following website echo.epa.gov/effluent-charts#UTP000053.
